Re: Cardiology Referral — Left Heart Catheterization

Patient Information

Name	Cynthia Ferguson
Date of Birth	1978-01-16
Phone	412-555-7359
Address	31647 Martin Knoll Apt. 419 Butler, PA, 16001
MRN	MRN-835030

Insurance

Primary Payer	Highmark BCBS PA
Primary Member #	UDI116155940
Secondary Payer	UPMC Health Plan
Secondary Member #	U49593103

Reason for Referral

This 48-year-old gentleman with established CAD presents with abnormal findings on recent noninvasive testing. He has significant cardiac risk factors including hypertension, hyperlipidemia, and a substantial smoking history. Prior coronary angiography approximately three years ago revealed single-vessel disease of the left anterior descending artery, which was managed medically at that time. He has been compliant with aspirin, a beta-blocker, and a statin regimen.

Recently, he underwent stress testing that demonstrated inducible ischemia in the LAD distribution with moderate reversible defect on imaging. He reports occasional exertional chest discomfort with exertion that resolves with rest, consistent with stable angina. On examination today, vital signs are stable, heart rate regular, and no acute distress. Cardiac auscultation reveals normal S1 and S2 without murmurs. Lungs are clear bilaterally.

Given the objective evidence of inducible ischemia in the setting of known CAD and recurrent anginal symptoms, I believe he would benefit from left heart catheterization to reassess his coronary anatomy and determine whether revascularization is indicated. Please evaluate for possible percutaneous coronary intervention versus continued medical management. I would also appreciate your assessment of his current risk stratification and optimization of his antianginal regimen. Thank you for your prompt attention to this

patient.

Requested Study & Coding

Requested Study	Left Heart Catheterization
CPT Code	93458
ICD-10 Code(s)	I25.110, I20.9
Urgency	ROUTINE
Requested Follow-up	9 days

Sincerely,

Reginald Robinson, MD
