Re: Cardiology Referral — Stress Test

Patient Information

Name	Trevor Campos
Date of Birth	1963-01-04
Phone	724-555-1674
Address	38849 Hurst Locks Suite 328 Monroeville, PA, 15146
MRN	MRN-691669

Insurance

Primary Payer	UPMC Health Plan
Primary Member #	U56413953

Reason for Referral

Mr. [Patient] is a 63-year-old gentleman with significant cardiac risk factors including hypertension, hyperlipidemia, and a 40 pack-year smoking history who presents with several months of exertional chest discomfort. He describes the pain as a dull, substernal pressure that occurs with moderate exertion, particularly when climbing stairs or walking briskly, and resolves within minutes of rest. He denies associated dyspnea, diaphoresis, or radiation to the arm or jaw. His wife notes he has been more fatigued than usual over the past two months. Current medications include lisinopril, atorvastatin, and aspirin. He has no prior history of CAD or MI.

On examination today, vital signs are stable with BP 138/82 and HR 78. Cardiac auscultation reveals regular rate and rhythm with no murmurs, rubs, or gallops. Lungs are clear bilaterally. Peripheral pulses are intact. A recent EKG shows normal sinus rhythm with nonspecific ST changes in the lateral leads, unchanged from prior. Given his age, risk factor burden, and presentation concerning for possible angina, I believe further cardiac risk stratification is warranted.

I would appreciate your evaluation and assessment regarding the need for stress testing to further characterize his ischemic risk. Please advise on appropriate next steps, including whether pharmacologic or exercise stress testing would be most suitable given his functional capacity.

Requested Study & Coding

Requested Study	Stress Test
CPT Code	93015
ICD-10 Code(s)	R07.9
Urgency	ROUTINE
Requested Follow-up	20 days

Sincerely,

Anthony Robinson, MD
