Re: Cardiology Referral — Stress Test

Patient Information

Name	Amanda Brown
Date of Birth	1963-08-21
Phone	878-555-2803
Address	500 Shaw Walk Butler, PA, 16001
MRN	—

Insurance

Primary Payer	Aetna
Primary Member #	W013267736
Secondary Payer	UnitedHealthcare
Secondary Member #	6474687234

Reason for Referral

Ms. [Patient] is a 62-year-old woman with a significant cardiac risk profile including longstanding hypertension who presents with a chief complaint of exertional chest pressure. She reports experiencing substernal pressure that begins with moderate exertion—specifically when climbing stairs or walking briskly—and resolves within several minutes of rest. The symptoms have been occurring intermittently over the past two weeks with increasing frequency. She denies associated dyspnea, diaphoresis, or radiation to the arm or jaw, though she does report mild fatigue. She has no prior history of coronary artery disease or prior cardiac events. Current medications include lisinopril and hydrochlorothiazide for blood pressure control.

On examination today, vital signs are stable with BP 148/92 mmHg and HR 78 bpm. Cardiac auscultation reveals regular rate and rhythm with no murmurs, rubs, or gallops. Lungs are clear to auscultation bilaterally. There is no peripheral edema or signs of heart failure. EKG performed in clinic shows normal sinus rhythm with no acute ST changes, though baseline repolarization abnormalities are present.

Given her age, risk factor burden, and classic exertional chest pressure pattern, acute coronary syndrome must be excluded. I am referring her urgently for stress testing to assess for inducible ischemia and further risk stratify her cardiac status. Please evaluate and advise regarding further management and any additional interventions that may be warranted.

Requested Study & Coding

Requested Study	Stress Test
CPT Code	93015
ICD-10 Code(s)	R07.9, I10
Urgency	STAT
Requested Follow-up	24 days

Sincerely,

Matthew Davis, MD
